

Execution Quality Comparison

Stocks

Our exclusive XpressRouter® technology is always on the lookout for price improvement opportunities, working to get a better price for your order than the National Best Bid or Offer (NBBO) - below the best offer for buys or above the best bid for sells.

How does it work?

Our goal is your best execution. When routing your order, we seek execution venues that consistently provide fast fills at prices consistently better than the displayed quote.

If your order executes outside NBBO, we may take action with the market center and request a price adjustment. Some prices outside NBBO occur due to market volatility or high trade volume. We regularly review executions to ensure best execution.

For more information view our Execution Quality Comparison FAQs.

Chart data for optionsXpress includes order data for optionsXpress, Inc. and its related international entities, and is calculated pursuant to SEC Rule 605 and derived from S3 Matching Technologies, a third-party vendor that is not affiliated with optionsXpress, Inc. The Market Order Price Improvement Chart data is derived from market orders for at least 100 shares and up to 2000 shares for S&P 500 and NDX 100 securities. The Market/Limit Order Price Improvement Chart data is derived from marketable limit orders for at least 100 shares and up to 2000 shares for S&P 500 and NDX 100 securities. Price Improvement \$ Amount Chart data is derived from all executed equity orders. Statistics displayed represent market orders with share sizes between 100 to 2000 shares, excluding pre-opening orders, orders received during locked, crossed, or fast markets, and destination outages.

Options

Our exclusive XpressRouterSM technology is always on the lookout for price improvement opportunities, working to get a better price for your order than the National Best Bid or Offer (NBBO) - below the best offer for buys or above the best bid for sells.

How does it work?

1. We quote all U.S. exchanges simultaneously to find the best possible price for your order.
2. We scour liquidity sources for potential price improvement.
3. We push orders to a broker for manual review if the market is artificially wide (too much space between the bid and ask).
4. We constantly monitor the exchanges to make sure your order stays in the marketplace for execution.
5. When a large order exhausts the NBBO quote, we wait for the quote to refresh to avoid blowing through multiple price levels.
6. Exchanges having technical issues are automatically removed from the router and existing limit orders are moved to a new exchange.
